## **UNIX FUNDAMENTALS**

Additional Student Materials - Crib Sheets

Useful UNIX Commands
vi Crib Sheets
Useful Web References

## **USEFUL UNIX COMMANDS**

## Setup

printenv Display environment variable settings

printenv var Display a particular environment variable – e.g. 'EDITOR'

setenv EDITOR xxx Change the default editor

passwd Change password

## **On-Line Help**

whatis cmd A one-line description of command 'cmd' man cmd Display the manual page for the command man -k topic Display all commands dealing with 'topic'

#### Alias Commands

alias Display all defined aliases

alias xxx Display command associated with alias xxx

alias xxx 'cmd' Assign a command to alias xxx. To make it permanent, insert into .cshrc file

## Access permissions on files

set-access Set default for future files \*

make-public name Make file or directory read-access to others \*
make-private name Make file or directory inaccessible to others \*

umask 077 Set permissions on all new files and directories to 'no-read / no-write' umask 022 Set permissions on all new files and directories to 'read / no-write'

chmod 600 file Make 'file' inaccessible to others chmod 644 file Make 'file' read-accessible to others chmod 700 dir Make 'dir' inaccessible to others chmod 755 dir Make 'dir' read-accessible to others

## Display Directory on the Screen

Is Display directory listing
Is -a Include invisible files (or 'la')

ls -l Include file sizes in bytes, and access permissions. (or 'll')

Is dir List files in another directory

Is file List a single filename. Use wildcard characters (? and \*) to list multiple files

Is -Fal dir Example of a complex command

## **Print Directory Contents**

Is | Ipr Print current directory on default printer

Is dir | Ipr Print directory dir

## **Display File Contents on Screen**

cat file Display 'file' contents on the screen head file Display the first 10 lines of a file

head -n file

tail file

Display the first n lines of a file

Display the last 10 lines of a file.

Display the last n lines of a file

Display a file one screen at a time

? to display keystrokes available

'b' to go back one screen
SPC to display the next screenful
/string to search for a string

RET to display the next line

'n' to move to next occurrence of string

9 and RET to display next 9 lines

'q' to quit from the 'more' command

## **Important Characters**

"pipe" directs the output of the first command to the input of another.

Sends the output of a command to a designated fileAppends the output of a command to a designated file

& Runs command in the background; you can still work in the window

Designates the home directory (\$HOME)

Comparison of the compariso

#### Wildcards

\* Any string of characters

? Any one character

[ ] Match any character in the brackets

#### **Print File Contents**

lor file Print the contents of 'file'

lpq Display the queue of printer jobs

lprm job# Remove a printer job
lprm - Remove all your printer jobs

lprm - Remove all your printer jobs lpr -Pprinter file Print file on the named 'printer'

lpconfig **printer\_id queue**lpconfig -r **queue**lpconfig -d **queue**Configures remote printers to a local print queue

Removes the said queue from the local system

Makes the said queue the default queue

lpstat (-options) Prints printer status information to screen (options not required) lpstat -u"user1, user2" Prints the status of requests made by the specified users

Print the status of requests induce by the specime

lpstat s Prints the queues and the printers they print to

lpstat -t Shows all print status information

lpstat -d Shows the default printer for the lp command lpstat -r Lets you know if the line printer scheduler is running

lp (-option) file(s) Like pr, this prints designated files on the connected printer(s) (options not

required and options may be combined).

lp -d*dest* **file(s)** Prints the file(s) to a specific destination

lp -nnumber file(s)

Allows user to designate the number of copies to be printed

lp -t*title* **file**(**s**) Places *title* on the banner page

lp -ooption file(s)

Allows printer-specific options to be used (i.e., double-sided or two pages per

side, etc.)

cancel **request\_id**Stops print jobs or removes them from the queue (**request\_ids** are obtained

using lpstat)

cancel -a **printer** Removes all print requests from the current user on the specified printer

cancel -u login\_id

Removes any print requests queued belonging to the user

#### Redirect Output

script file Send screen output from now on, to 'file'. Type 'exit' to stop sending

cmd > file Redirect output to file (no overwrite.)
cmd >> file Redirect output to file (append).
cmd >! file Redirect output to file (overwrite).

cmd | cmd Pipe output of first command to second command

cmd | tee file Pipe output to file and screen

## Change / Create Directory

pwd Display the name of the current directory

cd Change to your home directory

cd .. Change to parent directory (one level up)

cd dir Change to directory 'dir'

mkdir dir Make directory (create a new directory)

#### **Remove Files and Directories**

rm file Remove (delete) file

rmdir dir Remove an empty directory

rm -r dir Remove a directory and all its contents

## Move / Rename / Copy

mv source-file destination

- If destination is an existing directory, the source file will be moved into that directory
- If destination does not exist, the source file will be renamed
- If destination is an existing file, the source file will over-write the destination file

mv source-directory destination

- If destination is an existing directory, move the source directory into it.
- If destination does not exist, rename the directory.

cp src dst

Copy works the same as mv, but keeps original file or directory.

## Search for File or Strings within Files

search 'str'
find . –name 'str' -print
grep 'str' file

Search in this and lower directories for all filenames containing str \*
Search in directories for filename 'str' – may use wildcards in str
Search within file/s for 'str' – may use wildcards in filename

## Get Info about File / Spell Check

wc file Display how many lines, words and chars in a file

wc -w file Display a word count of file wc -l file Display a line count of file

ispell file Check spelling (Once in, press ? for help)

## Global Changes within a File

tr old new < a > b

Search and replace
sed <a > b s/old/new

Search and replace

expand a > b Expand tab characters to spaces colrm n m < a > b Remove columns n thru m

Input from a file > Will not over-write an existing file > Output to a file >> Will append to an existing file >! Will over-write an existing file

#### **Concatenate Files**

cat a b > c Concatenate files

paste a b > c Paste files together horizontally

## Sort / Split / Convert Files

sort a > c Sort lines contained in file a, output to c

split Split one file into two or more files (See man page for syntax)

uniq Remove or report adjacent duplicate lines

unix2dos Convert from Unix to DOS format dos2unix Convert from DOS to Unix format

## Compare Files

diff a b Display line-by-line differences sdiff a b Display two files side by side

## **Disk Space Information**

du (Disk usage) Display number of kilobyte blocks per file in current directory

du dir Display number of kilobyte blocks per file in dir

du -s \* Disk usage summary

#### **User Information**

whoami Display your own username

id Display your own username, ID, and group memberships

groups Display your own group memberships groups user Display group memberships of user

who Who is logged on

w Who is logged on and what are they doing finger Display info about all logged-on users

finger user Display user information ('user' is a person's login, first name, or last name)

#### Talk to Another User

talk user Send a message (immediately) to another logged-on user. CTRL-c to exit

mesg n Disallow 'talk' requests (Use 'mesg y' to allow)
mesg Check whether 'talk' requests are allowed

#### Date / Time / Calendar

date Display the date and time Cal yyyy Display a yearly calendar Display this month's calendar

vacation Reply to mail automatically while you are away

#### **Basic Calculator**

bc Get into calculator interactive mode
1+1 Type arithmetic expressions, using + - \* /

scale=n Change the number of decimal places

quit Exit from the calculator.

#### **Miscellaneous Commands**

!! Repeat the last command

!xxx Repeat the last command that started with xxx !n Repeat command n, (n is command line number)

; Command separator clear Clear the screen

history 9 Display the last 9 commands. The number is optional

## **Batch Unix Commands and Background Jobs**

cmd& Run command in background. (Only run one; do not logout until finished)
CTRL-z Suspend current job. (fg to resume in foreground; bg to resume in background)

jobs List background jobs (and job numbers).

ps Display status of foreground and background processes (and process id numbers)

fg n Bring job number n to foreground. (Omit the 'n' for most recent job)

kill PID Terminate job (PID is process id number)

## **Special Control Keys**

CTRL-c Interrupts most programs
CTRL-s Stop screen scroll
CTRL-q Restart screen scroll

CTRL-z Suspend current job (type fg to resume)

## VI CRIB SHEETS

Before doing anything to a document, type the following command followed by a carriage return:

#### :set showmode

## GOOD PRACTICE NOTE ESPECIALLY FOR BEGINNERS: WHEN USING VI, HIT [ESC] TWICE BEFORE EVERY NEW COMMAND. THIS MAKES SURE YOU AREN'T IN THE WRONG MODE.

When you open VI, you can't just start typing a thesis because VI has different modes such as APPEND MODE, INSERT MODE, REPLACE MODE, and COMMAND MODE. So to do certain actions, you must first enter the appropriate mode. See "MODES" for more in-depth information.

The final page of this document is a list of VI core commands. These are the bare essentials of VI compressed onto one page.

#### **STARTING VI** (VI is **CaSe SEnsItiVe**!!! So make sure Caps Lock is **OFF**.)

<b>Command</b>	Result		
vi filename	Edits filename.		
vi -r filename	Edits last saved version of filename after a crash.		
vi + <b>n</b> filename	Edits filename and places the cursor at line n.		
vi + filename	Edits filename and places cursor on the last line.		
vi filename file2	Edits filename and then edits file2 and so on. After saving file1 enter:n for the next file.		
vi +/ <b>string</b> file	Edits file and places cursor at the first line containing string.		

#### **ENDING VI** (Saving, exiting, etc.)

<b>Command</b>	Result			
ZZ or :wq or :x	Saves and exits VI.			
:w	Saves current file but does not exit.			
:w file	Saves current as file but does not exit.			
:w! file	Saves file overriding normal checking.			
: <b>n,m</b> w <i>file</i>	Saves lines n through m to a file named file.			
: <b>n,m</b> w>> <i>file</i>	Appends lines n through m to the end of a file named file.			
:q	Quits VI, saving changes before leaving. (You may be prompted to save.)			
:q!	Quits VI without saving changes.			
Q	Escapes VI into ex editor with the same file; :vi returns.			
:e!	Re-edits current file disregarding changes since last save.			
:we!	Re-edits current file saving changes.			

#### **STATUS** (Line numbers, etc.)

<b>Command</b>	<u>Result</u>
:.=	Shows current line number.
:=	Shows number of lines in file.
CTRL-g	Shows filename, current line number, total lines in file, and % of file location.
:1 (letter "l")	Displays tab (^l) backslash (\) backspace (^H) newline (\$) bell (^G) formfeed (^L^) of current line.

## **MOVING** (These will tell you how to get the cursor where you want it–fast.)

## MOVING THE CURSOR

Command (ESC exits all modes except the initial Command Mode.)  Result				
arrow keys	These do work, but they may be too slow on big files.			
h j k l	Left, down, up, and right, respectively.			
CTRL-d	Moves <b>forward</b> ½ <b>screenful</b> .			
CTRL-f	Moves forward one entire screenful.			
CTRL-u	Moves <b>backward</b> ½ <b>screenful</b> .			
CTRL-b	Moves backward one entire screenful.			
nG	Moves to line n in the file.			
G	Moves to the <b>end of file</b> .			
Н	Moves to the <b>top</b> of the screen.			
nН	Moves to <b>line n from</b> the <b>top</b> of the screen.			
M	Moves to the <b>middle</b> of the <b>screen</b> .			
L	Moves to the <b>bottom</b> of the <b>screen</b> .			
<b>n</b> L	Moves to <b>line n from</b> the <b>bottom</b> of the screen.			
w or W	Moves to the <b>start</b> of the <b>next word</b> in the line; W ignores punctuation.			
b or B	Moves to the start of the previous word in the line; B ignores punctuation.			
e or E	Moves to the <b>end</b> of the <b>next word</b> in the line; E ignores punctuation.			
0 (zero) or	Moves to the <b>first column</b> in the current line.			
n	Moves to the <b>column n</b> in the current line.			
^	Moves to the first non-blank character in the current line.			
\$	Moves to the last character in the current line.			
+ or <cr></cr>	Moves to the <b>first character</b> in the <b>next line</b> .			
-	Moves to the first non-blank character in the previous line.			
(	Moves back to the beginning of sentence.			
)	Moves forward to the beginning of the next sentence.			
{	Moves back to the beginning of the paragraph.			
}	Moves forward to the beginning of the next paragraph.			

#### **MOVING THE SCREEN**

<b>Command</b> (E	SC exits all modes except the initial Command Mode.)  Result
CTRL–e	Moves screen up one line.
CTRL-y	Moves screen down one line.
CTRL-u	Moves <b>screen up ½ page</b> .
CTRL-d	Moves <b>screen down ½ page</b> .
CTRL-b	Moves screen up one page.
CTRL-f	Moves screen down one page.
CTRL–I	Redraws screen.
z <cr></cr>	z-carriage return makes the <b>current line the top line</b> on the page.
nz <cr></cr>	Makes the <b>line n</b> the <b>top line</b> on the page.
Z.	Makes the current line the middle line on the page.
nz.	Makes the line n the middle line on the page.
Z-	Makes the current line the bottom line on the page.
nz-	Makes the <b>line n</b> the <b>bottom line</b> on the page.

## **MODES** (Adding and/or replacing text)

Con	mmand (	ESC exits all modes except the initial Command Mode.)  Result
i <i>text</i>	ESC	insert mode—You can start typing and it will insert <i>text</i> <u>before</u> the letter your cursor currently highlights until ESC is used.
Itext	ESC	<b>insert mode</b> —Same as (i) except it will insert <i>text</i> before the first nonblank character on the line until ESC is used.
atext	ESC	append mode—Allows you to insert text after the letter your cursor currently highlights until ESC is used.
Atext	ESC	<b>append mode</b> —Same as (a) except it will insert <i>text</i> at the end of the line until ESC is used.
rchar	ESC	replace mode—Replaces the currently highlighted character with <i>char</i> until ESC is used.
Rtext	ESC	replace mode—Same as (r) except it will overwrite until ESC is used.
О		Opens new line below the current line and insert until ESC is used.
O (lette	er "O")	Opens new line above the current line and insert until ESC is used.
CTRL-	-v char	While <b>inserting, ignores special meaning of</b> <i>char</i> (e.g., for inserting characters like ESC and CTRL) until ESC is used.
:r file		Reads file and inserts it after current line.
: <b>n</b> r file		Reads file and inserts it after line number n.

## **SEARCHING** (Find and/or replace what you need)

<b>Characters</b>	What they match			
^ (caret)	Matches beginning of line.			
\$	Matches end of line.			
•	Matches any single character.			
<u>/&lt;</u>	Matches beginning of word.			
<u> &gt;</u>	Matches end of word.			
[str]	Matches any single character in str.			
[^ <i>str</i> ]	Matches any character <u>not</u> in <i>str</i> .			
[a-n]	Matches any character between a and n.			
*	Matches zero or more occurrences of previous character in expression.			
\	Escapes the meaning of the next character (e.g., \\$ allows you to search for \$).			
//	Escapes the \ character.			
<b>Command</b>	<u>Result</u>			
(ESC exits all modes exce	pt the initial Command Mode.)			
%	Searches to beginning of balancing ()[] or {}.			
f <i>char</i>	Searches forward in current line to <i>char</i> .			
Fchar	Searches backward in current line to char.			
tchar	Searches forward in current line to character before char.			
Tchar	Searches backward in current line to character before char.			
/str <cr></cr>	Finds forward to str.			
?str <cr></cr>	Finds in reverse for str.			
:set ic	Ignores case when searching.			
:set noic	Pays attention to case when searching.			
: <b>n,m</b> s/str1/str2/opt	<b>Searches</b> from <b>n</b> to <b>m</b> for <i>str1</i> ; <b>replaces</b> <i>str1</i> to <i>str2</i> ; using <i>opt-opt</i> can be <b>g</b> for global change, <b>c</b> to confirm change (y to acknowledge, <cr> to suppress), and <b>p</b> to print changed lines.</cr>			
&	Repeats last :s command.			
:g/str/cmd	Runs cmd on all lines that contain str.			
:g/str1/s/str2/str3/	<b>Finds</b> the line containing <i>str1</i> , <b>replaces</b> <i>str2</i> with <i>str3</i> .			
:v/str/cmd	Executes cmd on all lines that do not match str.			

## Additional Student Resoources – Crib sheets

Command (ESC exit	is all modes except the initial Command Mode.)  Result			
CTRL-h <u>or</u>	While inserting, deletes previous character.			
Backspace CTRL–w	While inserting, deletes previous word			
CTRL–x	While inserting, deletes to start of inserted text.			
<b>n</b> x	Deletes n characters starting with current; omitting n deletes current character only.			
nX	Deletes previous n characters; omitting n deletes previous character only.			
xp	Switches character at cursor with following character.			
<b>n</b> dw	Deletes the next n words starting with current; omitting n deletes the current word only.			
<b>n</b> db	Deletes the previous n words starting with current; omitting n deletes the previous word only.			
<b>n</b> dd	Deletes n lines beginning with the current line; omitting n deletes the current line only.			
: <b>n,m</b> d	Deletes lines n through m.			
D or d\$	Deletes from the cursor to the end of the line.			
dcursor_cmd	<b>Deletes everything included in</b> the <b>cursor command</b> (e.g., dG would delete from current position to the end of the file, and d4 would delete to the end of the fourth sentence).			
<b>n</b> yy or <b>n</b> Y	Places n lines in the buffer-copies; omitting n copies only the current line to the buffer.			
y <b>cursor_cmd</b>	Copies from cursor to cursor_cmd (e.g., yG copies current line to the last line in the file to the buffer).			
"(a-z) <b>n</b> yy <u>or</u>	Copies or cuts (deletes) n lines into a named buffer a through z; omitting n works on current line.			
"(a-z) <b>n</b> dd				
p	Pastes copied text after cursor; also prints last deleted text.			
P	Pastes copied text before the cursor; also prints last deleted text.			
"(a-z)p or	Pastes text from a named buffer a through z after or before the current line.			
"(a-z)P				
nJ	Joins the next n lines together; omitting n joins the beginning of the next line to the end of the current line			
stext ESC	Substitutes text for the current character until ESC is used.			
S or cc text ESC	Substitutes text for the entire line until ESC is used.			
cw <i>text</i> ESC	Changes current word to text until ESC is used.			
Ctext ESC	Changes rest of the current line to text until ESC is used.			
ccursr_cmdtext ESC	Changes to text from current position to cursr_cmd until ESC is used.			
u	Undoes last command.			
U	Restores current line to its original state.			
" <b>n</b> p	Retrieves the last nth delete (last 9 deletes are kept in a buffer).			
"1pu.u.	Scrolls through the delete buffer until the desired delete is retrieved (repeat u.).			
n	Repeats last / or ? search command.			
N	Repeats, in reverse order, last / or ? search command.			
; (semi-colon)	Repeats last $\underline{f}$ $\underline{F}$ $\underline{t}$ or $\underline{T}$ search command.			
, (comma)	Repeats, in reverse direction, last / or ? search command.			

Command (ESC ex	its all modes except the initial Command Mode.)  Result		
. (period)	Repeats last text change command.		
CTRL-i or TAB	While inserting, inserts one shift width.		
<b>n</b> << or <b>n</b> >>	Shifts <i>n</i> lines left or right (respectively) by one shift width; omitting <b>n</b> shifts one line.		
< or >	Use with cursor command to <b>shift multiple lines</b> left or right.		

#### **SHELL WORKS** (Commands that execute outside of the VI program.)

Command (ESC ex	cits all modes except the initial Command Mode)  Result			
:! cmd	Executes shell command cmd; you can add these special characters to indicate: % name of current file # name of last file edited			
!! cmd	Executes shell command cmd, places output in file starting at current line.			
:!!	Executes last shell command.			
:r! cmd	Reads and inserts output from cmd.			
:f file	Renames current file to file.			
:w !cmd	Sends currently edited file to cmd as standard input and execute cmd.			
:cd dir	Changes current working directory to dir.			
:sh	Starts a sub-shell (CTRL-d returns to editor).			
:so file	Reads and executes commands in file (file is a shell script).			
!cursor_cmd cmd	Sends text from current position to cursor_cmd to shell command cmd.			
!}sort <cr></cr>	<b>Sorts</b> from current position to end of paragraph and replaces text with sorted text.			

#### MACROS, SUBS, ABBREVIATIONS (Macro functions, substitution strings, and abbreviations)

<b>Command</b> ( <b>ESC</b> exits all modes except the initial Co		mmand Mode.) Result
:[address]s/search	-string/ <b>replace-string</b> /[/g]	This is the format of a substitute command—description below.
address		o line numbers separated by a comma. A. represents the current line, \$ represents the forepresents the entire file.
search-string	A regular expression that can be a simple string of characters.	
replace-string	The replacement string.	
g	Indicates a global replacement (more than one replacement per line).	

## **Setting Options**

<u>Command</u> <u>Result</u> <u>Command</u> <u>Result</u>

NOTE: Map allows you to define strings of VI commands. If you create a file called ".exrc" in your home directory, any map or set command you place inside this file will be executed every time you run VI. To imbed control characters like ESC in the macro, you need to precede them with CTRL-v. If you need to include quotes ("), precede them with a \ (backslash). Unused keys in vi are: K V g q v \* = and the function keys.

EX: :map v /I CTRL-v ESC dwiYou CTRL-v ESC ESC when v is pressed, search for "I" (/I ESC), delete word (dw), and insert "You" (iYou ESC). CTRL-v allows ESC to be inserted.			
:map key cmd_seq Defines key to run cmd_seq when :map		Displays all created macros on status line.	
	pressed.		
:unmap key	Removes macro definition for key.	:ab <i>str</i> <b>string</b>	When <i>str</i> is input, replaces it with <b>string</b> .
:ab	Displays all abbreviations.	:una <i>str</i>	Unabbreviates str.

Options given are default. To change them, enter type :set option to turn them on or :set nooption to turn them off.

<b>Command</b>	<u>Result</u>	<b>Command</b>	<u>Result</u>
:set all	Prints all options to the screen.	:set nooption	Turns off option.
:set <i>ai</i>	Turns on auto indentation.	:set ap	Prints line after $d c J m : s t u$ commands.
set <i>bf</i>	Discards control characters from input.	:set eb	Precedes error messages with a bell.
set <i>ic</i>	Ignores case when searching.	:set dir=tmp	Sets directory or buffer file.
set <i>lisp</i>	Modifies brackets for Lisp compatibility.	:set magic	Allows pattern matching with special characters.
set <i>mesg</i>	Allows others to send messages.	:set <i>list</i>	Shows tabs (^l) and end of line (\$).
set nu	Shows line numbers.	:set opt	Speeds output; eliminates automatic RETURN.
set <i>prompt</i>	Prompts for command input with :.	:set re	Simulates smart terminal on dumb terminal.
set <i>report</i>	Indicates largest size of changes reported on status line.	:set ro	Changes file type to "read only."
set <i>scroll=</i> <b>n</b>	set <i>n</i> lines for CTRL–d and z	:set sh=shell_path	set shell escape (default is /bin/sh)
set showmode	Indicates input or replace mode at bottom.	:set <i>sw=</i> <b>n</b>	Sets shift width to <b>n</b> characters.
set <i>term</i>	Prints terminal type.	:set <i>terse</i>	Shorten messages with terse.
set timeout	Eliminates one-second time limit for macros.	:set <i>tl=<b>n</b></i>	Sets significance of tags beyond <b>n</b> characters (0 means all).
set ts=n	Sets tab stops to <b>n</b> for text input.	:set wa	Inhibits normal checks before write commands.
set warn	Warns "no write since last change."	:set window= <b>n</b>	Sets number of lines in a text window to <b>n</b>
:set <i>wm=</i> <b>n</b>	Sets automatic wraparound <b>n</b> spaces from right margin.		

STARTING VI (VI is 0	CaSe SEnsItiVe!!! So make sure Caps Lo	ck is OFF.)			
vi file	edit file	•			
	exiting, etc.)				
ZZ or :wq or :x	Saves and exits VI.				
:q	Quits VI, saving changes before leaving. (Yo	ou may be prompted to sa	ve.)		
:q!	Quits VI without saving changes.				
MOVING (These will tell you how to get the cursor where you want it–fast.)					
arrow keys	These do work, but they may be too slow on				
h j k l	Left, down, up, and right, respectively.	big files.			
CTRL-d	Moves forward ½ screenful.				
CTRL-d	Moves forward 1 whole screenful.				
CTRL-u	Moves backward ½ screenful.				
CTRL-b	Moves backward 1 entire screenful.				
	Moves to line n in the file.				
nG G	Moves to the end of file.				
Н	Moves to the top of the screen.				
N 4	Moves to the middle of the screen.				
L	Moves to the bottom of the screen.				
w or W	Moves to the start of the next word in the line	o: W ignores punctuation			
	Moves to the start of the previous word in the		00		
b or B e or E	Moves to the end of the next word in the line		OII.		
Λ	Moves to the first non-blank character in the
